

Hand Hygiene and PPE Observation and Audit Tools

Standardize
Compliance Audits
and Generate Reports
Automatically

The Centers for Disease Control and Prevention (CDC) estimates that healthcare providers clean their hands about half the times they should, putting patients at risk for HAIs. Promoting consistent hand hygiene is an effective way to reduce the incidence of HAIs and to mitigate the spread of antimicrobial resistant bacteria. **Vecna's Observation and Audit Tools** empowers infection preventionists with reliable data to determine the best path toward improving compliance.

Capture Compliance and Generate Reports Effortlessly with Vecna's Mobile App

- ✓ Automatically collect data across multiple observers
- ✓ Quickly identify problem areas requiring mitigation
- ✓ Eliminate time consuming manual collection – free up more time to focus on HAIs
- ✓ Customize dashboards and reports to provide actionable insights
- ✓ Analyze data by room location, professional role, date and more
- ✓ Versatile configuration – monitor hand hygiene, PPE, Environment of Care and more
- ✓ Optional integration into Vecna Clinical Surveillance Platform
- ✓ User-friendly mobile app interface
- ✓ Available in the App Store or Google Play
